Introduction
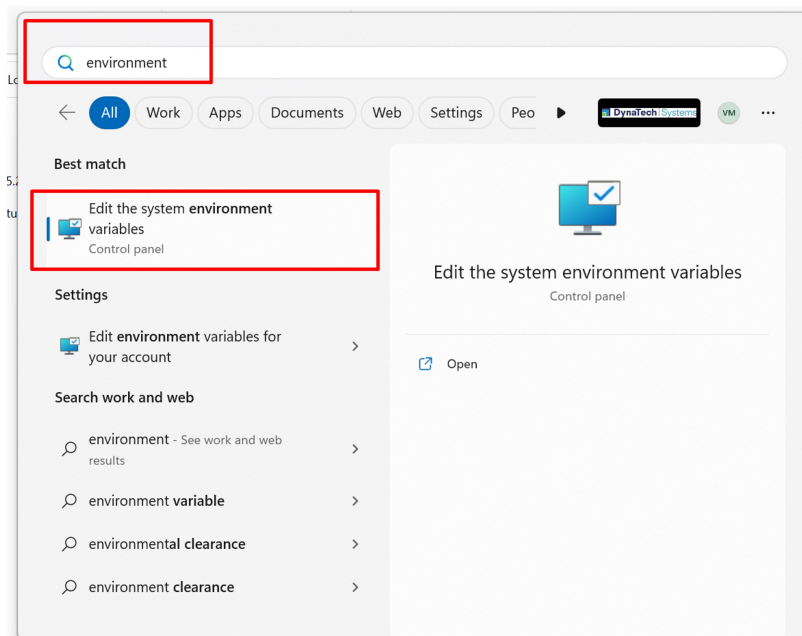

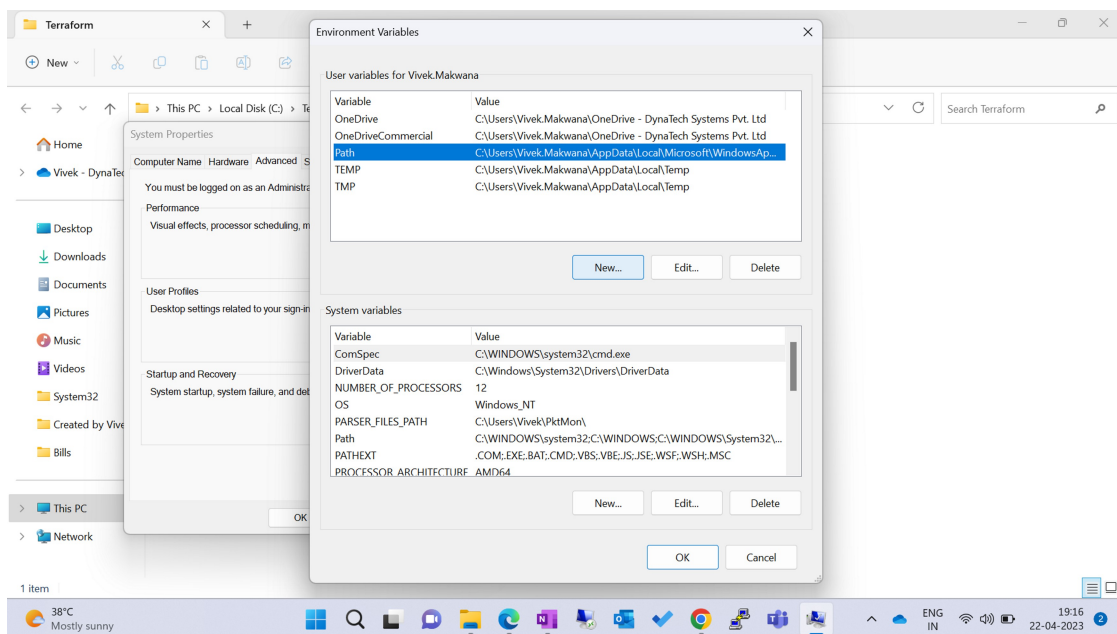

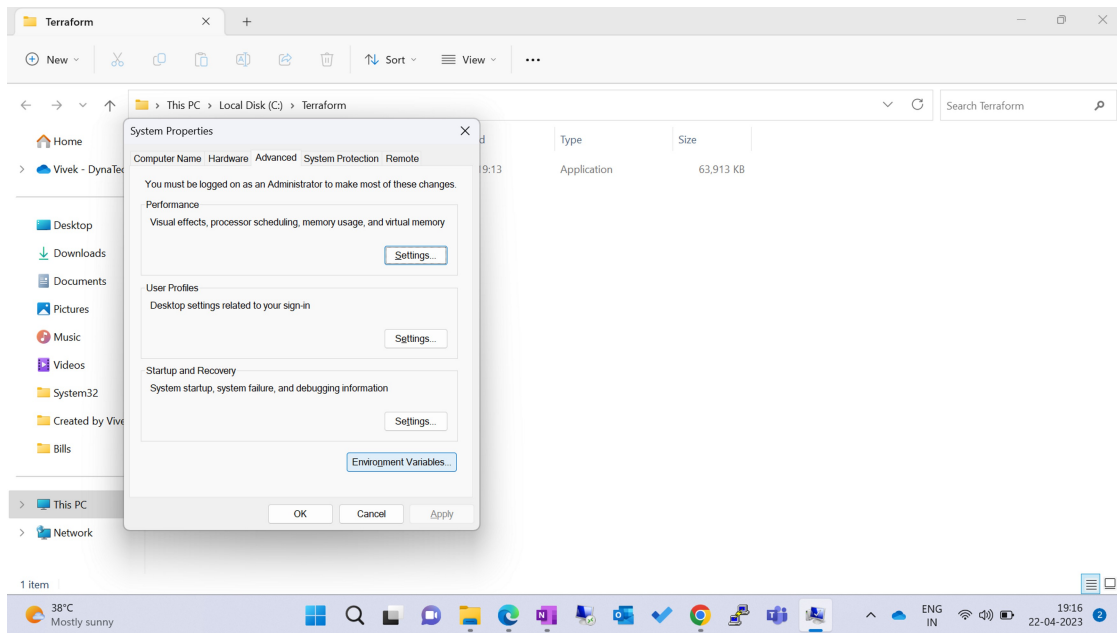

Why terraform
- Supports multiple providers
- Made for Create Infrastructure
- Maintain created resources state
- Create/Delete infra with single file only (Apply/Destroy)

Installation Of Terraform:
1. Download latest Version of terraform
   (https://releases.hashicorp.com/terraform/1.4.5/terraform_1.4.5_windows_amd64.zip)
2. Extract file to C:\terraform Folder
3. Set environment path

4. Add new path where you extract terraform folder (Ex: c:\terraform\)
5. Install any code editor (I like visual studio code)
6. Open folder:
7. Create File With hello-world.tf
